Complements for pools

molderdisnova®

Slides delfipiscinas®

We have seven different models available. All of them have an access stair with non slipping steps, aluminium handrail, a security bar and antivandalic caps. All the metal parts in stainless steel. The water installation has a stopcock and a water inlet supply for garden hose.

It also incorporates an innovative system to keep wet the track of the slide.

Several water jets come out from the security bar to the sliding track. You have to pass under the water jets to rush into the pool, to have more fun.

Features

Max. Weight. 750 Kg.

UV Resistance

Water Jets
Two water jets come out from the security bar to keep always the track wet. What a fun!

Front Security Bar and Security Sides
Once in the platform, the user is protected by the high handrails (70cms) and the stainless steel security bar.

Water stopcock
Hidden inside the handrails, there is a stopcock in order to stop automatically the water flow from the pipes when you are closing.

Two plain faces
In opposition to the rest of the products available in the market, our slides delfipiscinas® are manufactured following the RTM technology, what makes the two faces are plain.

Handles for a better access to the slide
Installed over the handrails of the stair offer a better access to children with the maximum security.

A water inlet
A quick gardening adaptor to connect easily to your conventional gardening hose.

UV Protection
The material used for its manufacture offers an excellent resistance to UV rays.

Security Caps
All the screws and bolts are protected with security caps to avoid the access to them and protect them against bumps or scratches.

Supporting Beam
The stainless steel supporting beam offers a solid installation in the outlet area. Due to this area supports the biggest strain during its use.

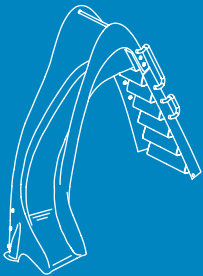

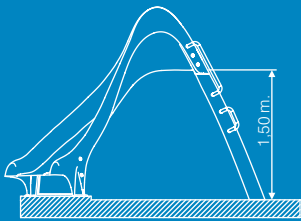

Non slipping steps
All the steps have a non slipping surface to avoid slips and guarantee an easy access to the little kids with the maximum security.

Stainless steel
All the components and elements together with the screws and bolts are made of stainless steel.

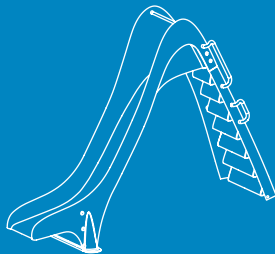

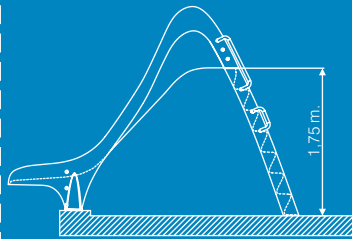

Screws for its installation
We provide together with the slide all the necessary elements for their installation such as: bolts, screws, security caps and instructions in several languages.
